Active Ageing Programme 2022

Would you like to be more active and take control of your health? Join our Active Ageing programme!

Our FREE Active Ageing programme provides an opportunity for people aged 55 and above to socialise whilst improving their health and wellbeing through small group based activities, delivered locally by our fantastic Community Health Improvement team.

Where?

Healthworks, Adelaide Terrace, Newcastle Upon Tyne, NE4 8BE. Monday's from 1pm to 2pm.

Supported by:

Being active prevents disease and keeps you healthy

What good things could being more active do for you?

Manaae

stress

Improve general wellbeing Improves mood

Maintain healthy weight Live longer and better

Reduce your risk by being more active. All adults keeping physically active reduces your chance of:

High Blood Pressure	-50%
Type 2 Diabetes	-40%
Coronary Heart Disease	-40%
Cardiovascular Disease	-35%
Stroke	-30%
Cancer (Breast, Colon, etc)	-25%
Joint and Back Pain	-25%
Falls	-21 %
Obesity	-10%

How can being active reduce my stress?

Healthy outlet for nervous energy, distraction from negative thoughts and feelings.

Reduction of fear, symptoms and catastrophisation. Increased sense of calm, better overall wellbeing.

Less stress and anxiety.

Better sleep, better relationships, socialise more.

Follow these top tips to keep you active:

If physical activity is new to you, start slowly and build up gradually over three to six months

Build activity into your daily routine – anything you can do to increase your movement will be beneficial. An example might be taking the stairs rather than the lift.

03

01

Some discomfort during and immediately after activity does not mean damage. It is normal for anyone to experience some muscle soreness after doing a new activity. Over time, as your body adapts, this will reduce.

Break up your sitting time – either at home or work. Standing up and taking a break from the screen will give you more energy, improve your concentration and help you be more physically active.

05

Find out what is available in your local area – your local council will have a list of activities and groups you could try. If you have a local community care coordinator (who often works closely with your GP surgery) they will have lots of information about what is available.

Choose an activity you enjoy – you are much more likely to stick with it. This may mean trying a variety of activities before you choose one to do regularly.

07

Tell your friends & family how you are trying to be more physically active. They may provide important moral support (as changing your habits is not easy) and may also be able to help you make time by helping out with things like childcare.

Consider undertaking physical activity with a friend, or joining a group – this might be more enjoyable, and you can motivate each other. You might also find that this helps you to feel safer, for example if you are walking/exercising outside.

80

09

Be realistic – some days will feel easier than others, and this is normal. Aim to build more movement and less sitting time into your normal life.

Being active is important for falls and frailty

What good things could being more active do for you?

High Blood Pressure	-50%
Type 2 Diabetes	-40%
Coronary Heart Disease	-40%
Cardiovascular Disease	-35%
Stroke	-30%
Cancer (Breast, Colon, etc)	-25%
Joint and Back Pain	-25%
Falls	-21%
Obesity	-10%

How can being active reduce the risks?

Top tips for physical activity in falls and frailty:

Being more active helps to promote confidence, prevent physical decline and gives a purpose and enjoyment to each day.

Exercise is often enjoyable in groups with social interaction helping with motivation, support and fun.

Try and build small amounts of activity into your daily routine in episodes of more than 10 minutes at a time.

Build up exercise gradually and start gently.

Exercise and being more active can help reduce your risk of falling, improve confidence and physical functioning for daily tasks.

Consider the use of chair based exercise programmes.

UK Chief Medical Officers' physical activity guidelines

Doing some physical exercise is good and every second counts so it's never too late to start.

Build strength and improve balance

Keep **muscles**, **bones** and joints strong

Be active

Including **moderate** and vigorous activities

Improve strength and balance

These activities are important across the life course for different reasons:

At ages

18 to 24 years

At ages 40 to 50 years

Helps to maximise bone Helps to maintain and muscle gains strength and slows natural decline in muscle mass and bone density

over 65 years Helps to preserve

At ages

strength and maintain independence

We should all aim to do strength and balance activities two to three times a week.

What counts as strengthening and balance activities

Aim to do muscle strengthening and balance activities at least two days a week

Minimise sedentary time Break up periods of inactivity

Weight Public Health England

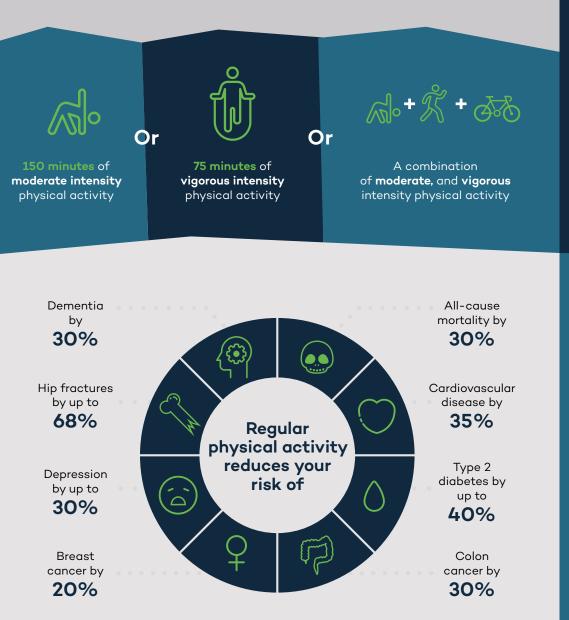

Ball games

Racquet sports

Be active and minimise sedentary time

The UK Chief Officers' physical activity guidelines recommended that each week, adults should aim for:

What counts as moderate intensity physical activity

Being able to talk but not sing indicates moderate intensity activity

Brisk walking

Cycling

Gardening

Dancing

Exercise class

What counts as vigorous intensity physical activity

Having difficulty talking without pausing is a sign of vigorous activity

Swimming/ Water aerobics

Active sports

Hiking

Running

Weight training
